

I would like to comment on a request from Mr. Young RM-10805 concerning his request to eliminate morse code for amatuer frequencies below 30Mhz.

The copy I read states that citizens band radio is an example of unregulated use of radio spectrum. I agree with this sumation.

I strongly disagree with his request. Total elimination for code proficiency is a "request to dumb down" operator capabilities and permission to use frequnecies below 30Mhz should continue to require showing a proficiency in morse code.

Thank you for your consideration.

Cullen Watts, am call KK5EQ
